

Lumnia Fly Control

Rentokil's LED Lumnia Fly Control Units provide Tascor Services' client with unrivalled protection against insect pests in their kitchen and food storage areas.

Rentokil
The Experts in Pest Control

Customer Need

Tascor Services provide high quality building maintenance and integrated FM services to businesses throughout the UK. One of their clients is Cleveland Police, where they are responsible for the maintenance of their two district headquarters and two town centre police offices.

Tascor Services are accountable for the pest control provided to the Cleveland Police sites, so they needed a company that could control pests quickly and effectively in order to support their clients' requirements.

The Rentokil Solution

Part of the pest control solution that Rentokil provided to Tascor Services included the installation of Rentokil's innovative Lumnia fly control units, which were positioned in the kitchen and food storage areas within the Cleveland Police sites. Lumnia units utilise unique LED technology to effectively attract, capture and kill flying insect pests hygienically on a rear glueboard, reducing the risk of a fly infestation developing.

The Lumnia units installed within the Cleveland Police site contain two low energy LED strips that reach up to 80% further compared to traditional insect light traps, providing full coverage fly control to the customer. Alongside this, the adaptive energy modes utilised by the Lumnia units allow them to adjust energy use automatically, depending on ambient light conditions. This further reduces energy consumption on the Cleveland Police sites, providing them with average energy savings of up to 61% compared to equivalent competitor fly killers.

Lumnia units are available in a range of different sizes and types to suit all customer requirements.

Customer Benefit

By having the Lumnia units installed on the Cleveland Police sites, Tascor Services are safe in the knowledge that these sites are robustly protected against flying insects. The modern design of the units provides the customer with a discreet, unobtrusive fly control solution, while the LED technology ensures the solution is both cost effective and environmentally friendly.

The LED technology provided by the Lumnia units provides our client with a cost effective solution, while also ensuring their premises are fully protected against flies.
